

# Monitor and Control your Infrastructure's Power Consumption from Wherever You Are.

The **PM8** unit is a reliable power management solution to control and monitor energy consumption on multiple circuits in your building's infrastructure.

The **PM8** allows you to control and monitor multiple circuits without the need for costly meters or adding timer systems.

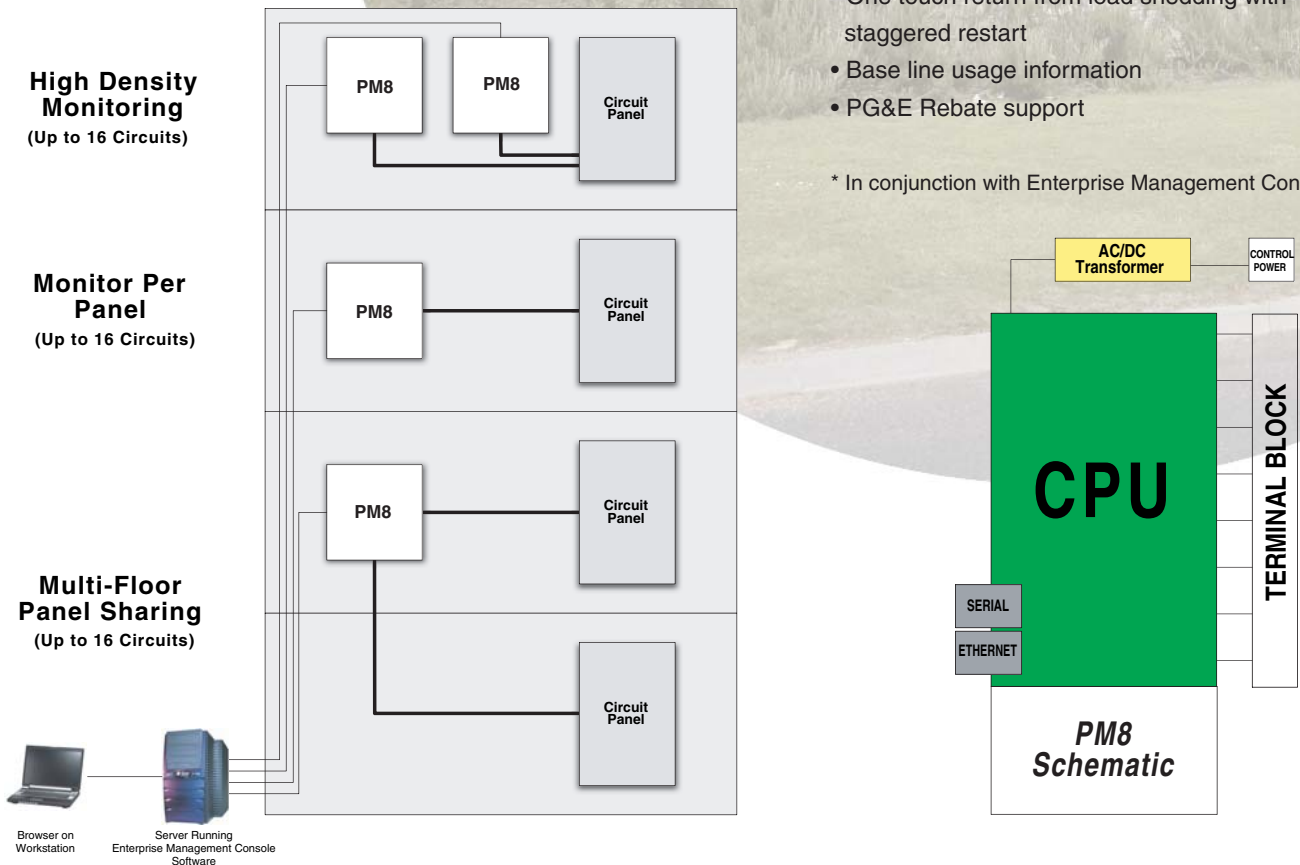

The **PM8** devices are versatile units that can be built to order as to which individual circuits will be monitored only or monitor and control enabled.

The **PM8** is a cost effective, expandable, easy to use, robust power management tool that C.H. Reynolds Electric provides complete turnkey installations.

## Features:

- Load monitoring up to 3200 amps
- Any AC voltage 50/60 HZ
- Switch loads up to 30 amp AC 120/208 volts and 20 amp AC 277 volts\*
- Separate power usage from peak and off peak times
- Load shift between peak and off peak times\*
- Schedule loads with it's time clock feature
- Lighting control capability includes off hour sweeping for the century systems
- One touch load shedding\*
- One touch return from load shedding with staggered restart
- Base line usage information
- PG&E Rebate support

\* In conjunction with Enterprise Management Console (EMC)

## Quality, Integrity & Service
